## INTRODUCTION

Lithereum, A phenomenal Cryptocurrency project which has been an idea for a long time, finally took off when it's tokens were created and deployed on Blockchain on October 9<sup>TH</sup> 2020. Lithereum has gone on to witness great unexpected exponential growth making it one of the most promising projects in recent time, with a very massive and supportive community of almost 40,000 Members, backing Lithereum across Telegram, Twitter and Youtube.

#### **BLOCKCHAIN**

Blockchain, itself is a decentralized Ledger of all transactions across a peer-to-peer network. Using this technology, participants can confirm transactions without a need for a central clearing authority. The Blockchain is a simple yet indigenous way of passing information from A to B in a fully automated/Safe manner. One party to a transaction initiates the process by creating a block. This block is verified by thousands, perhaps millions of computers distributed around the net. The verified block is added to a chain, which is stored across the net, creating not just a unique record, but one with unique history. Falsifying a single record would mean falsifying the entire chain which is virtually impossible. Lithereum uses this model for monetary transactions, Making it secured as a decentralized cryptocurrency in the global cryptocurrency market.

Lithereum has partnered with Ethereum to use it's ERC blockchain server temporarily during these times of pre-sale and Airdrop. It will migrate to it's own superior LTH blockchain in early February 2021. The ERC Blockchain is rumoured to have slow transactions and high fees, while this may be true, Lithereum has partnered up in a time which coincides with the launch of ETH 2.0 upgrade which will reduce slow transactions and Increase efficiency in the ERC Blockchain network, and not to worry Lithereum superior Blockchain is already in development and migration would occur in February 2021 when it would be launched, already poised to be one of the best blockchain explorer in modern times which will completely solve the issues of high transaction fees and slow paced transactions

#### **ROADMAP**

Lithereum tokens were created and deployed on Blockchain on the 9<sup>TH</sup> of October 2020. The project' have been a Long time idea before major crypto experts and enthusiast, and high time investors from all over the globe came together to Launch the project' early October 2020. The Lithereum team consists of Major players in the world cof cryptocurrencies, high level skilled Crypto-based programmers, Investors and top Digital networkers and promoters who have come together with the single agenda of Making lithereum a major coin in the global cryptocurrency market. The month of October was the month of launch which coincided with great activities including major Registrations and distributions for Airdrop 1 and 2, Initial pre sale which was Termed pre-sale 1 where coins where sold at initial starting price of 0.07\$/LTH, early Investors who invented in this time period would benefit maximally when lithereum goes live soon, other major activities was listing on uniswap and ledgerDEX on the 24<sup>TH</sup> and 26<sup>TH</sup> respectively. Pre-sale 2 also took off during the final days of October and the first burning of 35% of Total supply of Lithereum tokens was also deployed on the ERC Blockchain.

November has also been a very busy month, as we've seen Lithereum go on to list on several decentralized exchanges which includes, BitXmi, bamboo Relay, Ether Delta, Mooniswap, and Fork Delta, making it the most pre-listed coin of any cryptocurrency project in recent time. The website <a href="https://www.LITHEREUM.LIVE"><u>WWW.LITHEREUM.LIVE</u></a> was also launched in November, a well designed cryptocurrency website directed through Blockchain technology. The website also hosted Presale 3, which was the ICO crowd sale, other activities in November will include the listing on trust wallet, coin market cap, coingecko and coin codex, and another 35% Of the Lithereum token will also be burnt in the final days of November. We've seen the Lithereum team keep up with it's roadmap all through which gives investors and the Lithereum community the confidence that the team would surely keep to the timelines as written on Road Map, making Lithereum one of the best projects to invest in, in recent times.

Final activities coming up in December, January and February respectively would include Uniswap liquidity Creation, listing on Hotbit and Probit, Launch of farming/ Mining in the Lithereum network, and final burning of tokens so as to increase scarcity and promote high demand, which will in turn keep the price of Lithereum pumped up. January will feature the mobile app development, testing and launching of a unique swap feature enabled. The Road Map concludes at February 2021, where Lithereum Superior Blockchain would be completely developed and final listings of Lithereum tokens on Binance exchanges with more pairs added. Through October down into the early weeks of December we've seen Lithereum keep to the Road map or even faster, This shows how to all Investors and the entirety community how raised funds is being properly utilised by the Team to ensure all Investors and the entire community benefits maximally. The Lithereum Team has kept up-to-date with the roadmap all through launch early October and would continue to do that all through the ROADMAP. As the Roadmap concludes in February 2021, that will not be the end of the Lithereum journey but the birth of one of the greatest token already heading to the top of the global cryptocurrency market.

### **GROWTH/STATISTICS**

In terms of growth, Lithereum has become one of the fastest growing token in the upcoming Cryptocurrency industry.

Since it's launch in early October, with a very small community of few hundred members, Lithereum community has grown to almost 40,000 members across Telegram, Twitter, and Youtube. The undiluted support of the Lithereum community has also been seen in the Pre-sale with almost 1Million Lithereum tokens already sold, Making it the one of the most pre sold out project in recent time. Lithereum token has also seen a pre sale price surge from 0.07\$/LTH to almost 0.75\$/LTH in pre sale value, this has not dampened the morale of the community but even more Investors troop in daily as they see the massive potential of Lithereum. Lithereum has gone on to listing on several large exhanges and would list on even Larger ones in the next few weeks. A surge in Investors have also been seen in recent time, and a more expanded team of global cryptocurrency experts to push lithereum forward.

Statistically, Lithereum has outdone any other project and proved that this is not a regular Crypto project, but as boldly crested, A phenomenal Cryptocurrency Token built on blockchain Technology. Let's consider some lithereum statistics below

- -A large community of almost 40,000 members
- Approximately 1 Million tokens sold, the largest of any ERC dependent project.
- Already listed on 7 Exchanges, the highest amount if any pre-launched Crypto token
- -Double Airdrops distributed
- -Stuck closely to roadmap, fulfilling as written out

Now let's closely look at the tokenomics Of Lithereum. On creation day,  $9^{TH}$  of October, a total of 15Billion tokens were created, 5 Billion tokens were burnt by the Lithereum' in October, another 5 Billion Lithereum is already set for burning in November, reducing the total amount of Tokens to 5BILLIONS. Some might wonder Is that not still too much, sure the Lithereum team has put this under consideration and have concluded according to the roadmap, more Lithereum Tokens would be burnt in December to reduce the total amount minimally to ensure a limited number of Lithereum in circulation and then, would store any left over unburnt tokens to create the Global reserve bank of Lithereum.

Burning tokens across the months would ensure Lithereum is reduced to a very minimal amount which would lead to a price surge and benefit all Investors massively.

## **POTENTIAL**

Since the Launch of Lithereum Token, Lithereum has gone on to shatter all upcoming tokens records, Proving doubters and critics wrong. The potential of what Lithereum could be tomorrow is very massive. Careful analysis shows Lithereum can go on to compete with Litecoin or Even Ethereum with in

a short period of time, if all holders cooperate with the Lithereum team. Lithereum according to the high-skilled programmers in the team, would go on to solve the issue of high network fees, related to transactions in other cryptocurrencies, which will in turn make decentralized transactions more easier, faster and safer. Lithereum has also built up innovations to solve this through a unique transparent mining system rooted in the Lithereum community, another issue which lithereum would solve is the problem of Low yield farming. In most Cryptocurrency farming cases, farmers tend to get 0.1-0.5% daily interest, Lithereum has also come up with one of the highest yield plan of 3% daily to all farmers when farming begins in December 2020, one of the highest of any known cryptocurrency. Heavy listing process is already on for Lithereum to be listed on Coingecko, Coin codex, and Coin market cap, which will lead to a final listing on Trust wallet, this will happen really soon, reflects what an effective team behind this project.

Lithereum is already developing it's unique app which will be launched in January, with good swapping features enabled, to crown it all Lithereum would migrate to it's own superior Blockchain in February 2021. This makes the ERC Blockchain, a temporary host server for pre-sale and airdrop, lithereum would permanently migrate to it's own blockchain in February, which will yield one of the lowest fees in the History of cryptocurrency transactions, higher speed of blockchain execution, and a wider scalability Lithereum is already poised to be farmed with Trons, More Altcoins would be added to the list in time.

Lithereum has Massive potentials, Uniswap Liquidity would be added in December to fulfill the Roadmap but all Investors are advised to hold on to their tokens as the team is set to pump the price in a very short time, Lithereum is poised to possibly hit 500\$/LTH. Massive profits for all Investors guaranteed.

Lithereum is also set to create it's own decentralized exchange which would increase the global trade volume of Lithereum, and also support other existing and upcoming coins. The potential for Lithereum is massive rest assured, all Investors have made the wise choice by investing in Lithereum.

**SPECIFICATIONS** 

NAME: LITHEREUM

SYMBOL: LTH

DECIMAL: 18

INITIAL SUPPLY: 15000000000

SMART CONTRACT:0x00d9bee3133648a1eebefdc06dc9c7c6be22f8fc
